Kanlux NEON LED are unique LED strips available in three color temperatures: cold white, warm white, neutral white and blue. They are waterproof (IP65) and exceptionally flexible. Their advantage is uniform illumination along the entire length (no light points visible) and a 3-year warranty. Kanlux NEON LED is a very bright light that can be successfully used not only for home or commercial use, but also as advertising NEONS. Their flexibility and elasticity allow them to be formed into virtually unlimited shapes. Each Kanlux NEON LED strip is 5 meters long and is powered by 24V.

- 3 years Warranty under the terms of the warranty statement, available on our website
- Linking LED strips into a section exceeding 5 m is not permitted. Applications requiring longer sections should be electrically divided (connected in parallel) into sections not exceeding 5 m in length.
